Professional Summary

Passionate and highly skilled front-end developer in Angular with less than one year of experience in creating dynamic and responsive web applications. Proficient in Angular, TypeScript, HTML, CSS, and JavaScript to design clean, efficient, and user-centric code. Enthusiastic about front-end design with a strong focus on UI/UX principles and modern development practices. Passionate about learning and staying updated with the latest technologies to build innovative and scalable solutions.

Skills

- **Frontend:** HTML, CSS, JavaScript (OOP, DOM, BOM, API Calls), TypeScript
- **Frameworks:** Angular, Tailwind CSS, Bootstrap Library
- **Tools:** Git, GitHub, GitLab, VS Code, Git Bash, Figma
- **Personal Skills:** Continuous Learning, Team Collaboration, Communication Skills, Troubleshooting, Problem-Solving

Experience

Freelance application: Dr.Shimaa Platform

- The platform is designed to display platform recordings and enable users to identify and communicate with the doctor.
- Developed mobile-first, responsive to all phones and screens
- Set up a firewall so that no one other than registered students can access the recordings.
- Preparing an admin page for full control of the doctor

Projects

1. **E-commerce App (using Angular and Fakestore API)**

   - Developed a fully functional eCommerce web application utilizing Angular framework.
   - Integrated Fakestore API to fetch product data, including images, descriptions, and prices.
   - Implemented user authentication and authorization features to secure user accounts and manage access.

- Designed and developed a responsive and intuitive user interface for seamless browsing and shopping experiences across devices.
- Utilized Angular Material for UI components and styling to maintain consistency and enhance user experience.
- Implemented features such as product search, sorting, filtering, and pagination to enhance usability.
  - Live Link: (https://github.com/Ahmed-AbdElwanes/E-commerce-app)

2. **Guesś word** (HTML, CSS, JavaScript)

- Created a responsive word-guessing game with dynamic user interactions
- Automatically move between inputs to improve user experience.
- Provide hints feature and show the score at the end of the game.
- Prevent any effects from occurring after the game ends.
